

Experiences with strategy and implementation of RR for water. Creating new value chains and economics

pre-conference workshop @ IWA RR 2019

Venice (Italy) 8th September 2019

This workshop includes:

- Presentations by forerunners in the field of RR from water where they will share their experiences: successes, failures, critical success factors.
- Concrete cases will be shared that underpin these critical success factors. Universal hurdles will be discussed, as well as the possible solutions to overcome these. Discussion with panel of experts with a strong focus on the viewpoints of the end-user / consumer and the regulator in relation with (but not limited too) water & energy, water reuse, nutrients recovery, organics recovery, C-footprint and integration in the water tariff.
- The attendees are challenged to come up with 'challenging' cases from their own work field (at least 2 weeks before the session). These case will be discussed in the second part of the workshop, where the input of all attendees is welcomed.

Target participants:

We encourage researchers, utilities, water professionals, technology providers, service providers, policy makers, consultants to participate in this workshop as well as market segments and industries outside of the water sector that can valorize the recovered resources.

Participation is free - limited number of participants (TBD).

If interested to participate and/or to present an interesting case, please send an expression of interest to IWARR2019 Secretariat: iwarr2019@univpm.it.
